SUMMARY

Third-year B.E. Artificial Intelligence & Data Science student at MMCOE, Pune. Built the backend of **Sahyog**, a multilingual, voice-first civic grievance platform, for Smart India Hackathon 2026, and completed a six-month AI & Data Science internship at Techkisan Automation. Interested in data analytics, machine learning and speech & language AI; seeking internships where I can build and ship.

EDUCATION

Marathwada Mitra Mandal's College of Engineering (MMCOE), Pune Expected 2028
Bachelor of Engineering, Artificial Intelligence & Data Science · Savitribai Phule Pune University (SPPU)

PROJECTS

Sahyog — Multilingual Civic Grievance Platform Smart India Hackathon 2026 · Team Toofan+

- Stack:** Python, FastAPI, PostgreSQL, PostGIS, pgvector, Ollama, faster-whisper, Bhashini, Docker, MinIO, Next.js, pytest
- Built the backend of a platform where rural citizens in Jharkhand report civic problems by **voice, text or photo** in their own language (PS 26043, Smart Education).
 - Designed a pipeline of **nine Python/FastAPI services** — language normalisation, evidence extraction, triage, dispatch, a university-research track, industry partnerships, lifecycle tracking and a transparency layer.
 - Integrated **Bhashini** for speech-to-text, translation and spoken replies, and self-hosted **Meta MMS, NLLB-200 and Indic Parler-TTS** to add Santali, which Bhashini does not cover — 8 languages supported in total.
 - Used a local LLM via **Ollama** to structure text reports and classify photos, with embedding-based duplicate detection, spam and priority checks, and a **human validation gate** before any ticket is raised.
 - Built **"Ask Sahyog"**, a retrieval-augmented Q&A over pgvector that answers how the system works and whether an issue is already tracked; added Docker support and object storage.

[Live demo](#) · [Video walkthrough](#) · [Source code](#)

IoT Plant Emotion Detection Project Based Learning · SE AI&DS, MMCOE · 2024–25

- Stack:** Arduino Uno, Arduino C/C++, soil-moisture sensor, DHT11
- Team of four: built an offline Arduino system that monitors soil moisture, temperature and humidity in real time and maps readings to plain-language plant "moods".
 - Calibrated a dry-soil threshold that triggers a buzzer alert and switches it off automatically once the plant is watered.

EXPERIENCE

AI & Data Science Intern — Techkisan Automation, Gondia 6 months · completed Jan 2026 · Hybrid

- Learned AI and automation concepts under the guidance of the firm's senior executives.
- Assisted with project documentation and collaborated with the team on projects; described in the completion certificate as "diligent, hardworking and inquisitive".

TECHNICAL SKILLS

Programming & data	Python, SQL, data analysis, Microsoft Excel
AI & ML	Machine learning fundamentals, LLMs (Ollama), retrieval-augmented generation, speech-to-text (faster-whisper), Bhashini APIs
Backend & data stores	FastAPI, PostgreSQL, PostGIS, pgvector, MinIO, Docker
Web & tools	Next.js, Tailwind CSS, Git & GitHub, pytest
IoT & hardware	Arduino Uno, Arduino IDE, DHT11 & soil-moisture sensors
Languages	English, Hindi, Marathi

LEADERSHIP, ACTIVITIES & WRITING

- Marketing, Activity Planner Committee** — AESA (AI & DS Engineering Student Association), MMCOE · 2024–25; organising team for **Dexterity 2K24-25**, the department's national-level technical event (certificate of appreciation, Oct 2024)
- HR Coordinator** — Forengers Foundation · **Design Head** — MicDrop Club · **Volunteer** — National Service Scheme (NSS), with participation certificate
- Author** — "Convinced, Not Hacked" — essay on social engineering and online financial fraud in India · [read online](#)
